

Security alert - (classroomname) IAM Management Console

us-east-1.console.aws.amazon.com/iamv2/home?region=us-east-1#/users/create

Step 1: Specify user details
Step 2: Set permissions
Step 3: Review and create
Step 4: Retrieve password

Set permissions

Add user to an existing group or create a new one. Using groups is a best-practice way to manage user's permissions by job functions. [Learn more](#)

Permissions options

☒ Add user to group
Add user to an existing group, or create a new group. We recommend using groups to manage user permissions by job function.

☐ Copy permissions
Copy all group memberships, attached managed policies, and inline policies from an existing user.

☐ Attach policies directly
Attach a managed policy directly to a user. As a best practice, we recommend attaching policies to a group instead. Then, add the user to the appropriate group.

Get started with groups
Create a group and select policies to attach to the group. We recommend using groups to manage user permissions by job function, AWS service access, or custom permissions. [Learn more](#)

Permissions boundary - optional
Set a permissions boundary to restrict the maximum permissions for this user. Use this advanced feature used to delegate permission management to others. [Learn more](#)
